

CCP Module 12: Cloud Governance Lab

This course acts as a continuation of course module 10 by introducing a range of advanced Cloud Governance topics.

As a continuation of course modules 10 and 11, this hands-on workshop allows attendees to apply the frameworks, models, practices and strategies previously covered in order to complete a set of exercises.

The lab-style exercises require participants to solve a number of cloud computing governance-related problems associated with establishing cloud project and cloud service lifecycle governance programs and applying cloud governance precepts and processes in response to business requirements.

The instructor works closely with participants to ensure that all exercises are carried out completely and accurately. Attendees can voluntarily have any exercises reviewed and graded as part of the class completion.

Duration: 1 Day
